

The Ultimate Zero-Budget B2B CRM, Checkout & Catalog Suite

Terminus is an enterprise-grade workspace hub built for modern business operators. Built from the ground up to support secure administrative gateways, multi-tenant isolation, automated stock validation, and direct-checkout recovery marketing, it provides full offline-first durability with seamless real-time Supabase cloud synchronization.

TENANCY & OPERATIONS

- Isolated Multi-Tenant Hub**
Register and deploy separate business workspaces (e.g. Cosmetics, Jewelry, Tech) from a single control center. Individual base currencies (BDT, USD) and metrics are fully sandbox-isolated.
- Administrative Access Gate**
Secure workspace data behind a credential-authenticated administrative gateway. Session persistence keeps active operators logged in across page reloads.
- Real-Time Supabase Engine**
Fully synced with Supabase databases on mount. Inserts, updates, and deletes are executed on remote PostgreSQL tables with resilient browser storage backups.

SALES & CRM ENGINE

- Order Checkout Console**
Generate structured checkout slips with barcode SKU lookup, instant pricing totals, base shipping calculations, and manual bargaining discounts.
- CRM Directory & Blacklist**
Unified customer index checking returns, duplicate customer prevention, lifetime order counts, and manual blacklist/whitelist flags with risk indicators.
- Invoice Viewer & Print Console**
View, search, and copy invoice summaries to clipboard. Generates and downloads beautifully styled formal BDT customer invoices in PDF format.

ERP CATALOG & WAREHOUSE

- Inventory SKU Catalog**
Manage catalog listings with precise pricing, cost tracking, and automated stock adjustments. Stock levels decrement automatically upon checkout confirmations.
- Inline Warehouse Updates**
Perform lightning-fast, spreadsheet-like inline stock counts, price revisions, and cost updates from the primary catalog manager table, synced instantly.
- Low-Stock Alerts & Diagnostics**
Dynamic warnings trigger whenever items fall below the threshold margin (5 units), ensuring prompt restocking pipelines.

MARKETING & ANALYTICS

- Zero-Cost Abandoned Lead Recovery**
Queues incomplete checkout attempts into a live lead recovery board. Generates direct WhatsApp templated chats without expensive API messaging costs.
- Reactive KPIs & Metrics**
Aggregates workspace financial stats, including today's revenue calculations, pending order volumes, low-stock counts, and lead recovery rates.
- 7-Day Sales Trend Visualizer**
Renders a high-contrast interactive SVG area chart mapping weekly transactions, featuring hover tooltips and dynamic scale ceilings.

TECHNOLOGY SPECIFICATIONS:

Frontend: Next.js 14 (App Router) // Styling: Tailwind CSS & Vanilla CSS Transitions // Icons: Lucide React

Database Layer: Supabase (PostgreSQL Client integration) // State Management: Offline-First Local Storage Persistence
